

# **SPARK TESTER**

## **WDD 764**

### **FOR FINDING BAD WELDS OR PIN HOLES**

#### **Model No. BD-50E**

This rugged tester is specifically for tank lining inspection and designed for applications when **continuous use** is necessary. The unit is operated by a high voltage transformer which isolates the unit from line power and runs cooler.

Use bare wire, foil or any conductive material as a backing. A **LIGHTNING STREAK** will come from the tip of the spark tester to the backing material showing a defect in the welded area.
